I discover very simple way to redirect Login Page When session end in MVC. I have already tested it and this works without problems.

In short, I catch session end in _Layout 1 minute before and make redirection.

I try to explain everything step by step.

If we want to session end 30 minute after and redirect to loginPage see this steps:

1. Change the web config like this (set 31 minute):
2. `<system.web>`
3. `  <sessionState timeout="31"></sessionState>`
   `</system.web>`
4. Add this JavaScript in `_Layout` (when session end 1 minute before this code makes redirect, it makes count time after user last action, not first visit on site)
5. `<script>`
6. `  //session end`
7. `  var sessionTimeoutWarning = @Session.Timeout- 1;`
8.
9. `  var sTimeout = parseInt(sessionTimeoutWarning) * 60 * 1000;`
10. `  setTimeout('SessionEnd()', sTimeout);`
11.
12. `  function SessionEnd() {`
13. `      window.location = "/Account/LogOff";`
14. `  }`
   `</script>`
15. Here is my LogOff Action, which makes only LogOff and redirect LoginIn Page
16. `public ActionResult LogOff()`
17. `{`
18. `   Session["User"] = null; //it's my session variable`
19. `   Session.Clear();`
20. `   Session.Abandon();`
21. `   FormsAuthentication.SignOut(); //you write this when you use FormsAuthentication`
22. `   return RedirectToAction("Login", "Account");`
   `}`

I hope this is a very useful code for you.
